

BEAM TABLE LAMP – US VERSION

TOM CHUNG ON THE DESIGN “The idea for the Beam Lamp came while renovating my childhood home. I had made a shelf to use as divider between the hallway and living room and needed a lamp that could at once throw light out into the living room and down the hallway. The Beam Lamp mimics a single ray of light that travels through a round tube with its dimmer allowing the user to change the volume of light omitted from both ends of the cylinder shape. Tweak the design to your personal needs through its rotating base and sleek body of anodized aluminum, whether it be as direct lighting or for an ambient glow. With the Beam Lamp, you can alter the volume of light omitted, change its direction by the turn of its base and place it on any shelf, table or windowsill for a new perspective on modern lighting.”
